

Cable Shielding

Cable shielding:

The cable shield can be grounded at one end, or both ends of the cable. Cable shielding can be supplied as a ready-made sleeve, on rolls or as a flexible shielding tube. It comes either in continuous lengths, on a reel or cut into lengths.

Ready-made sleeve:

Ready-made sleeves can be supplied in Aluminium Tape or in Conductive fabric. The material provides a high shielding performance. The ready-made (Customised is preferable) sleeve is used for cables with large diameters and flat cables. Can be produced with a self-adhesive backing.
